

How We Work

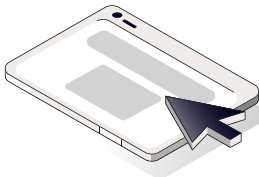

1

Requirements Gathering

In the initial stages, we meet with our client, to discuss the scope of the project, draft a deadline for finishing the work and prepare a document for the requirements gathering.

2

Design Planning

Following the submission of the requirements, we design the user interface and wireframe of each webpage.

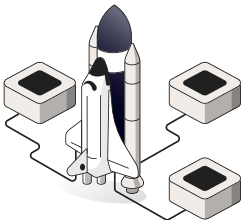

3

Development and Coding

We then kick start the project to develop the website, one webpage at a time.

4

Testing and Feedback

After the successful development of the project, the client will have access to the website for testing and submitting feedbacks on what we are to improve.

5

Launching and Maintenance

At this stage, our client decides on which day to launch the website and we make preparations to push it live and maintain it.
